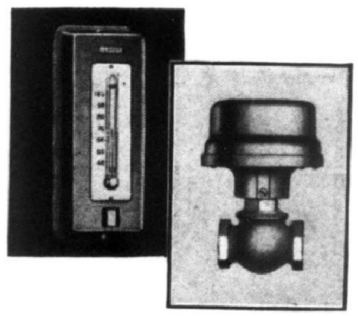
JOHNSON CONTROL IN THEATRES

Fox Theatre . . . . Atlanta
Marye, Alger & Vinour . . *Architects*
Robt. S. Newcomb, *Consulting Engineer*

Declared "the largest and finest theatre in the South. Cost $3,000,000. Seating capacity 5,000." Johnson Control regulates the air conditioning system. Johnson Control instruments and switches handle the operation of the heater coils, by-pass dampers and fresh air dampers — providing a constant temperature of the air at all times, regardless of out-door weather and fluctuating sizes of audiences in the theatre. Johnson Control of temperature and humidity is complete; and applies to every system of heating and ventilating and to every individual requirement. Write now for the interesting book of details: illustrating and describing every phase of Johnson equipment and service.



The All-Metal System . . . . The All-Perfect Graduated Control Of Valves and Dampers . . The Dual Thermostat (Night & Day) Control: Fuel Saving 25 to 40 per cent.
